RESULT 1 AAV04700 AAV04700;

20q13 amplicon; chromosome 20; tumour; detection; homeobox T shirt; chromosomal abnormalities; probe; gene therapy; antisense inhibition; treatment; age-related macular degeneration; retinitis pigmentation; Leber's congenital amaurosis; ds. Rommens J; Kowbel D, Godfrey T, Homo sapiens 20q13 amplicon 41.1 transcript. Gray JW, Collins CC, Hwang S, 96US-00680395. 96US-00731499. 97US-00785532. 97WO-US012343. (first entry) (REGC) UNIV CALIFORNIA. WPI; 1998-110587/10. Homo sapiens. 15-JUL-1996; 16-OCT-1996; 17-JAN-1997; 21-JUL-1998 WO9802539-A1 15-JUL-1997; 22-JAN-1998.

New sequences from the 20q13 amplicon - used for detecting chromosomal abnormalities, particularly tumours, and for developing products for treating diseases.

Claim 1; Page 62; 91pp; English.

The sequence is that of a cDNA sequence 41.1, which was isolated from the 20q13 amplicon. It shows homology to the homeobox T shirt gene in Drosophila. It can be used as a probe for the detection of chromosomal abnormalities at 20q13. It and other sequences isolated from the 20q13

                  are useful as probes or as probe targets for monitoring the relative copy number of corresponding sequences from a biological sample such as tumour cells. The sequences can also be used in therapeutic applications for modulating the expression of the endogenous gene or the activity of the gene product. Examples of the rapeutic approaches include antisense inhibition of gene expression, gene therapy, and monoclonal antibodies that specifically bind the gene products. The products can also be used in the treatment of other diseases, e.g. age-related macular degeneration, Leber's congenital amaurosis and retinitis pigmentation

                                                                                                                                                                                                                                                                         ABZ79873 to ABZ79905 encode the human nucleic-acid associated proteins designated NAAP-1 to NAAP-33 given in ABP96218 to ABP96250. The NAAP sequences have cardiant, cytostatic and neuroprotective activities, and can be used in gene therapy. The NAAP sequences can be used for preparing a composition for diagnosing or treating a disease or condition associated with decreased expression or overexpression of functional NAAP e.g. cardiovascular or neurological disorders or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                 The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel colypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, immunologically assaying the polypeptide or peptide or the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide in an expressible manner and an antisense polynucleotides and encoded proteins are useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related of genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of genes may be included in their assured in tissue and/or cell regeneration. Membrane proteins, signal transduction-related proteins, creameription-related proteins, disease-related proteins and genes encoding them can be used as indicacrs for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate encoding them can be used as indicacrs for diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the Buropean Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2237

New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

Claim 1; SEQ ID NO 105; 1185pp; English

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC3089) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the crecombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of convention further discloses methods for a polypeptide of the invention. The invention further discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention capturession or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the captain of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Sequence 3442 BP; 1006 A; 949 C; 858 G; 629 T; 0 U; 0 Other;

78.7%; Score 1013.6; DB 10; Length 3442; 97.3%; Pred. No. 1.6e-286;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mise, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a lead of the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (EBISA) Disorders winch a reflammed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac careat, cerebrovascular disorders e.g. cardiac careat, cerebrovascular disorders e.g. corneal infection, bacteria, viruses and fungi and ocular disorders e.g. corneal infection, bacteria, viruses and fungi and ocular disorders e.g. corneal infection, corneal system disorders e.g. Alzhimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, corneal system disorders e.g. Alzhimer's disease, corneal infection, corneal system disorders e.g. Alzhimer's tisorders e.g. corneal infection, corneal system disorders e.g. on many other tisorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, crespentation, for supporting cell culture of primary tissues, to crespentate tissues and in chemotaxis. The polypeptides can also be used cas a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present csequence encodes a novel secreted protein of the invention. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      573
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GTCTCCAGTGAAGTCTCAACTTTGCATAAAAGAAAAGGCCGGCAGTCCAACTGGAATCCT 154

New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular orenal disorders.

The invention relates to human novel polypeptides and their associated polynucleotides. The polypeptides and polynucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointeetinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's a momaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diseases e.g. radioimmunoasesys or enzyme linked immunosorbant assays

(ELISA). Disorders which are diagnosed or treated include autoimmune
diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.

(ELISA). Disorders which are diagnosed or treated include autoimmune
classases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.

arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis,
cr errous system disorders e.g. Alzheimer's disease, infections caused by
carteria, viruses and fungi and ocular disorders e.g. corneal infection,
can also be used to aid wound healing and epithelial cell proliferation,
cr on also be used to aid wound healing and epithelial cell proliferation,
cr oprevent skin aging due to sunburn, to maintain organs before
cr esquerate tissues and in chemctaxis. The polypeptides can also be used
cas a food additive or preservative to increase or decrease storage
capabilities, fat content, lipid, protein, carbohydrate, vitamins,
cminerals, cofactors and other nutritional components. The present
c sequence encodes a novel secreted protein of the invention. Note: The
sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological sondition with the disorders and in diagnostic alleviating symptoms associated with the disorders and in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         573
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     813
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 633
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         693
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   131

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. and multiple sclerosis), muscular disorders, respiratory diseases (e.g. and tiple sclerosis), polyps and sinusitis), reproductive disorders, gastrointestinal disorders pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, bastein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and estage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial infarction) and cancerous diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix. notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                           1947 TTTGCCTCGAGGCTCTTCCAGACATCAGAGGCAAATACCTGCTGTGTCTGATCTGGCCC 2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Probe #5097 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1444 GAGGGCAGCGAGAAGGGAGAAACCCCCAGCCCCACACCCCACATCTGCTCTGAGCAATGGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AGCCCAAGTTCAAGCACAATTTCCATGTTCCAAAGTCGAATCTCAATGTCATGGACAAG 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ficelia, but was ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAAGTCCTCCCCAAAGCCACCACCCCAAAGCCAGGCTCCTCCTCCTCCAGGGTCCCCCATG

The present invention provides the protein and coding sequences of a number of ovarian and breast antigens. These are shown in AA/62467-AA/62572 and AA/42240-AA/42345. The sequences can be used in the diagnosis, prevention and treatment of breast and ovarian cancers, and their metastases. The present sequence is a genomic sequence of the invention. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directlinem WIPO at ftp.wipo.int/pub/published_pot_sequences
New isolated nucleic acids and polypeptides, useful for diagnosing treating and/or preventing human diseases and disorders.

The invention relates to a DNA which encodes a novel polypeptide. A vector containing the DNA is useful as a reagent in estimation of standard substance. The antibody is useful for detecting the vector containing the DNA and for screening substances and compounds that interact specifically with the vector containing the DNA. The vector containing the DNA is used as a pharmaceutical, in treatment or as preventive agent with respect to disease e.g., brain diseases preferably mental disorders. The present sequence represents human DNA encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 7081 BP; 1789 A; 1895 C; 1756 G; 1641 T; 0 U; 0 Other;

          The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell transformed with the vector, the proteins encoded by the polynucleotides, antibodies that bind to the proteins encoded by the polynucleotides of the proteins or the expression of the polynucleotide. The polynucleotide can be used as probes for the identification and isolation of full length contains and genomic DNN. The polynucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders such as viral infections, becterial infections, fungal infections, autoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Albeimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. themophilia), inflammatory disorders (e.g. Crohn's disease) and in the treatment of burns, inclsions and ulcers. The proteins are also useful for regallating hematopoises, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2535

WPI; 2003-371981/35. P-PSDB; ADC32719 New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

Example 2; SEQ ID NO 2034; 1185pp; English.

ADC30899 and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or amelicating a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention; methods for the industating and/or monoclonal antibodies for carrying out the methods that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the CDNA sequences of the invention (ADC31861-ADC328627) and the polypeptides encoded by the contigs (ADC332628 ADC33284). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet The invention relates to 971 novel human cDNA sequences (ADC29919-

```
disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The mucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a human contig sequence used in an example of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at five but wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                            676
                                                                                                                                                                                                                                                                                                                                                                                                                                      TGCGCCCTCGCCAACCACGCCCCGGCCCTGCCATGCATCAACCCATTCAGCGCCCTGCAG 120

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6812339

GENERAL INFORMATION

GENERAL INFORMATION

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PELING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FREESEQ for Windows Version 4.0

LENGTH: 31623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28477 CACACCCTAGCATGGCTTCCCCAGGGCCCAGGTTCTGGCTCATGTCTCCCACTTCGGCC 28536
